

1952
July 25/52
EXCERPT taken from weekly report of Fisheries Officer G W. Winsby
For the week ending Saturday ~~12~~ day of ~~-----~~ July ~~-----~~ 1952.

ESCAPEMENT: On Thursday the writer examined the Nimpkish River for $2\frac{1}{2}$ miles to just above the canyon. Sockeyes showed abundantly throughout the distance covered and it is the writer's opinion that the escapement may now be considered to be in excess of last year. The writer was pleased to note the absence of hair seals in the river and particularly in the canyon where they have appeared in considerable numbers during past years. On Friday evening the writer visited the Nimpkish River again and found Sockeyes showing well in the lower reaches of the river. Water levels have been very satisfactory so far throughout the run and a very ~~and a very~~ excellent seeding of the Nimpkish spawning grounds is expected.
